

NEWS - DBK ITM

Hello Mrs./Mr. ,

Refreshing news from DBK:

Peltier Cooling Modules

Without refrigerant and compressor system

What is the major advantage of the thermoelectric cooling technology over the technology employed in conventional cooling units? The Peltier coolers are portable - and cool without refrigerant and compressor system. A practical companion especially during the summer months. Examples of typical applications for the DBK thermoelectric coolers are food transport carts or medical apparatuses. The standard range of our in-house manufactured coolers comprises assemblies of 60W, 100W, 150W and 200W (24V DC, IP 54). Custom designs are available by request.

Product Features:

- Active forced air cooling
- Compact solid state construction
- Air-to-air thermoelectric cooler with axial fans
- Fast thermal response
- Maintenance-free
