The DBK David + Baader GmbH, a company from the southern palatine region, has been awarded at the 2019 Rhineland Palatine Innovation Award Ceremony. The award in the category “industry” was presented by Minister of Economics Volker Wissing for a “**low pressure loss PTC Air Heater**” - one of many innovative solutions of the past years. “At DBK, we promote innovation by giving our employees the space and freedom they need to develop new and creative ideas.” said Head of Division Dr. Ing. Jürgen Prokop. “With innovative solutions, such as the awarded product, we solve the challenges of our worldwide customers. Our vision is to become the solution provider that continuously sets new standards for its customers.” said Dr. Andreas Stratmann, CTO of DBK. This recognition is another step towards implementing that vision.

The awarded product is a PTC Air Heater with minimum pressure loss at high performance. It has been developed to meet the HVAC industry’s high requirements and to offer a solution for ventilation system manufacturers. The air heater is already part of many HVAC systems in new residential buildings. DBK is currently developing further solutions, including retrofitting options.
